

Git & GitHub

Git → Version control system is a tool that helps to track changes in code

GitHub → Website that allows developers to store & manage their code using Git

Folder in GitHub → Repository

→ Clone → Cloning a Repo on our Local Machine

→ status → Displays the status of the code

~~ls~~ -a → Displays all the Hidden files

→ add → adds new or changed files in our working directory to the Git staging area

→ commit → It is the record of change

→ Push → upload local repo content to remote repo

→ init → used to create a new git repo

Git Branches

→ Pull → used to fetch & download content from a remote repo & immediately update the local repo to match that content
